

*air***FLEX**

A custom solution for all project specifications that combines industry leading performance and high energy efficiency.

Innovation Through Heritage

About the Air Flex Range

Air Flex is our AHU range, built to satisfy all project specific requirements. Air Flex combines industry leading performance with highly efficient energy consumption levels to achieve Part L2 Building Regulation compliance.

Our Air Flex solution is constructed using the highest grade materials and components to ensure an operating life cycle.

Air Flex Features

Air volume range up to 75.0 m³/s

Air leakage standard : DW143 up to Class D 2500Pa

Suitable for indoor, outdoor and corrosive environments

Heat Recovery : Rotary Heat Exchanger (RHE), Plate Heat

Exchanger (PHE) or Run Around Coil arrangement (RAC)

Low energy (WRAS approved) integrated cooling or humidification option c/w intelligent control

Indirect and direct gas fired heating

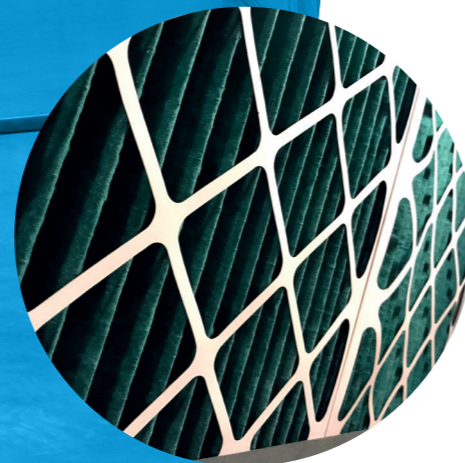

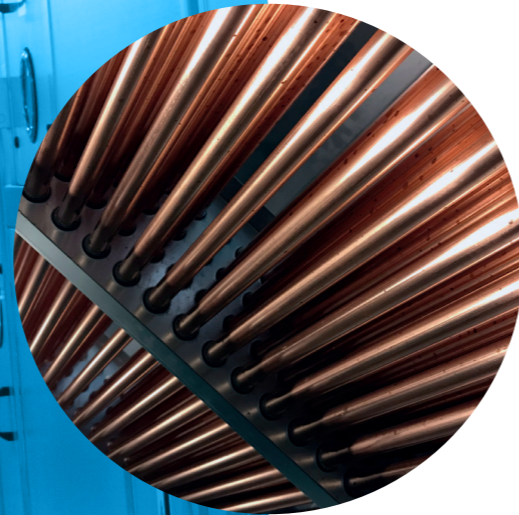

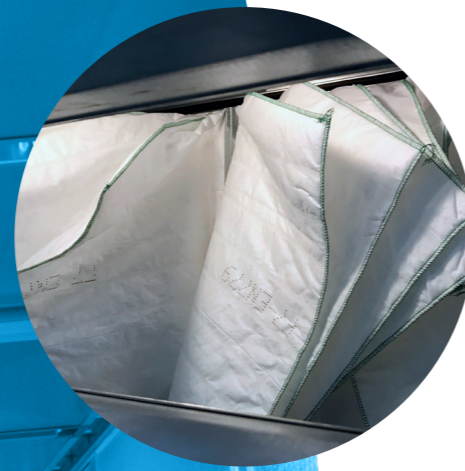

High efficient thermal and acoustic properties

Flat pack or kit form assembly

Minimising Energy Consumption

The Air Flex range was developed with a focus on minimising energy consumption, significantly reducing the 'lifetime' cost and environmental impact of the product.

www.ahs.uk.com

The UK's leading supplier in energy efficient air handling products and solutions.

AHS design and install the next generation in compact heat recovery systems. Easy to use and delivering highly efficient energy consumption. From bespoke design, quality manufacture and installation, for over 30 years AHS has offered industry leading, cost effective and energy efficient solutions.
